SUMMARY

Linux and Production Support professional at DXC Technology with nearly 5 years of experience (5 years expected in November 2026), supporting 3,500+ RHEL Linux servers in a 24/7 enterprise retail production environment. Experienced in infrastructure and application monitoring, log analysis, incident response, root cause analysis, Linux patching, configuration changes, maintenance validation, and cross-team troubleshooting. Uses Datadog, ServiceNow, Postman APIs, UEIO health checks, Bash/shell scripting, and SQL. Currently strengthening knowledge of SRE practices, cloud fundamentals, containers, and CI/CD.

EXPERIENCE

Analyst II, Software Engineering

DXC Technology **November 2021 - Present, Bengaluru, India**

- Support 3,500+ RHEL Linux servers in a 24/7 enterprise retail production environment, helping maintain service availability and business continuity.
- Monitor server health and performance using Datadog dashboards and alerts; investigate memory utilization and other system anomalies.
- Troubleshoot production application and server incidents using log analysis, service status checks, service restarts, and systematic investigation, including HTTP 500 errors.
- Coordinate P1/P2 incidents and bridge calls with Database, Network, Application Support, and other teams to restore services and reduce business disruption.
- Perform Linux patching, firmware updates, server configuration changes, and pre-/post-maintenance validation in line with production procedures.
- Monitor UEIO server health through Postman APIs and UEIO queries; investigate unexpected responses and coordinate or escalate remediation.
- Follow Incident, Change, and Problem Management processes; maintain timely ServiceNow ticket updates and communicate incident status to clients and stakeholders.
- Use Bash/shell scripting and diagnostic/health-check scripts to support repeatable operational checks and troubleshooting.
- Document recurring issues, troubleshooting steps, and resolution procedures; share technical knowledge with colleagues during support shifts.
- Managed AWS EC2 instance configuration, security group updates, and automated deployment pipelines supporting monthly rollouts, ensuring 99.99% uptime and adherence to PCI compliance in a 3,500+ server enterprise environment over 18 months.

PROJECT

Production Support & Monitoring

Ahold Delhaize

- Provide production support and monitoring for the Ahold Delhaize retail environment, supporting Linux and UEIO servers.
- Use Datadog dashboards, APM monitoring, health checks, and documented procedures to investigate anomalies and support root cause analysis.
- Coordinate incident resolution with cross-functional teams and follow IT service management practices.

EDUCATION

Bachelor of Engineering, Electronics and Communication Engineering

SJM Institute of Technology, VTU, Chitradurga · 2021 · 7.67

- Grade: 7.67.

Pre-University (PCMB)

Government Junior PU College, Jagalur · 2017

- Grade: 83%.

SKILLS

Linux & Infrastructure: RHEL Linux 8 environment, Linux administration, server health checks, service management, log analysis, patching, configuration changes, firmware updates, pre/post-maintenance validation

Monitoring & Reliability: Datadog dashboards and alerts, APM/performance monitoring, memory utilization alerts, application/server health checks, HTTP 500 investigation, UEIO health checks

Incident & Service Management: Incident, Problem and Change Management, P1/P2 incident coordination, ServiceNow, SLA support, RCA, stakeholder updates, cross-functional troubleshooting

Scripting & Data: Bash/shell scripting, health-check and diagnostic scripts, SQL

Collaboration: Database, Network and Application Support coordination, technical documentation, knowledge sharing, client/stakeholder communication, shift support
